DETAILED ACTION

Declaration Under 37 CFR 1.131

1. The supplementary declaration filed on 4/14/2006 under 37 CFR 1.131 is sufficient to overcome the De Yong et al (US 6,577,757) reference.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Regarding claims 1 and 9, Meisberger discloses for each of a plurality of types of local characteristics, each type occurring at least once within electrical circuitry to be inspected (see figure 2, numerical 65 die area "local characteristic" and numerical 64 die "electrical circuitry", Col. 4, lines 50-55), identifying at least one portion of interest within the electrical circuitry whereat the local characteristics are expected to occur (Figure 2; numerical 65 the die area that is he care area or call the significant area that is to be inspected "portion of interest") and inspecting an image of each portion of interest using an inspection task selected in response to the type of local characteristic expected to occur, (see figure 1, numerical 54 database having the data base of the

images with the good images of the portions to be inspected and numerical 56, the defect processor for comparison of the images in order to detect the defect).

Regarding claims 2 and 10, he further discloses, the local characteristics includes a chip area, (see figure 2, numerical 65) as claim.

Regarding claims 3 and 11, he further discloses the identifying of at least one portion of interest comprises identification of at least one spatial region within the electrical circuitry (col. 4, lines 60-65).

Regarding claims 4-6 and 12-14, he further discloses identification of at least one spatial region is at least partly based on a user input, a computer generated input or partly based on a computer generated input, (see col. 4, lines 50-65 and col. 3, lines 45-50, states that all the inputs are computer generated and also, the inputs can be interrupted by the user any time i.e. the inputs are partly in putted by the user of partly computer generated) as claimed.

Regarding claims 7 and 15, he further discloses computer-assigning (Figure 1) an inspection task to at least one individual portion of interest in response to the type of local characteristic expected to occur in the individual portion of interest (Col. 4, lines 45-67).

Regarding claims 8 and 16, he further discloses outputting at least one indication of defects responsive to the inspecting step (col. 14, lines 36-37, the pixels are flagged as defective).
